

Lizmap Web Client: next steps

From 15 years of development to the futur

What is Lizmap Web Client ?

Web Geoportal for QGIS

- To share your works on QGIS
- To publish full-featured map applications to the web

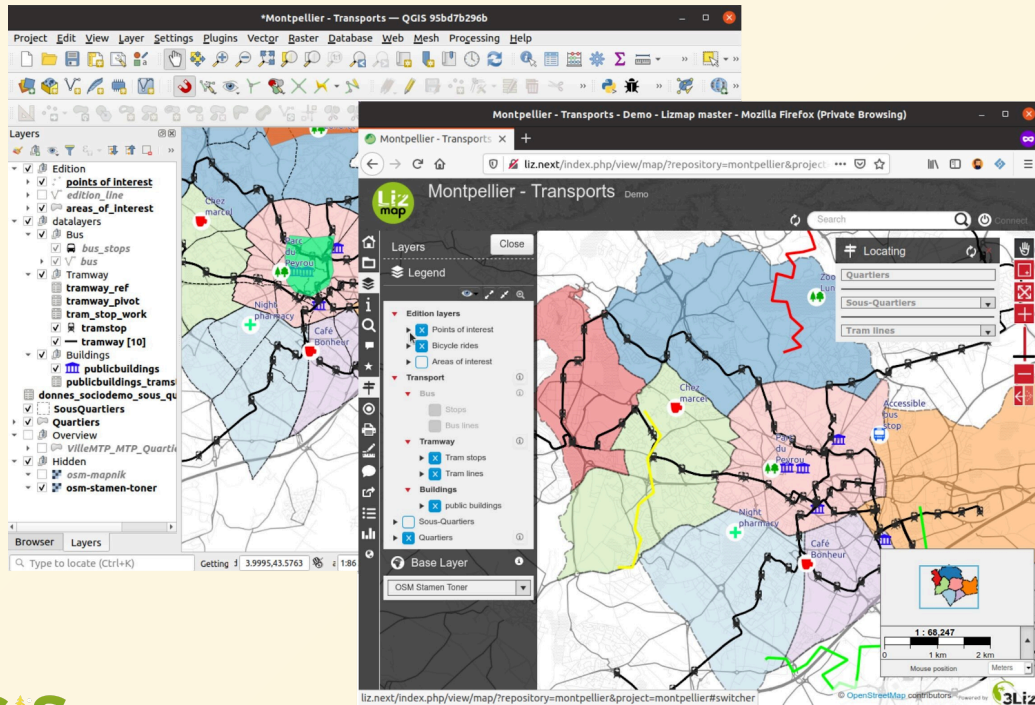

On top of QGIS Server

- Prepare on QGIS desktop, deploy on Lizmap
- Web administration panel is **mainly** for authentication and authorization management (users and groups)
- All other configurations are done **within QGIS desktop**

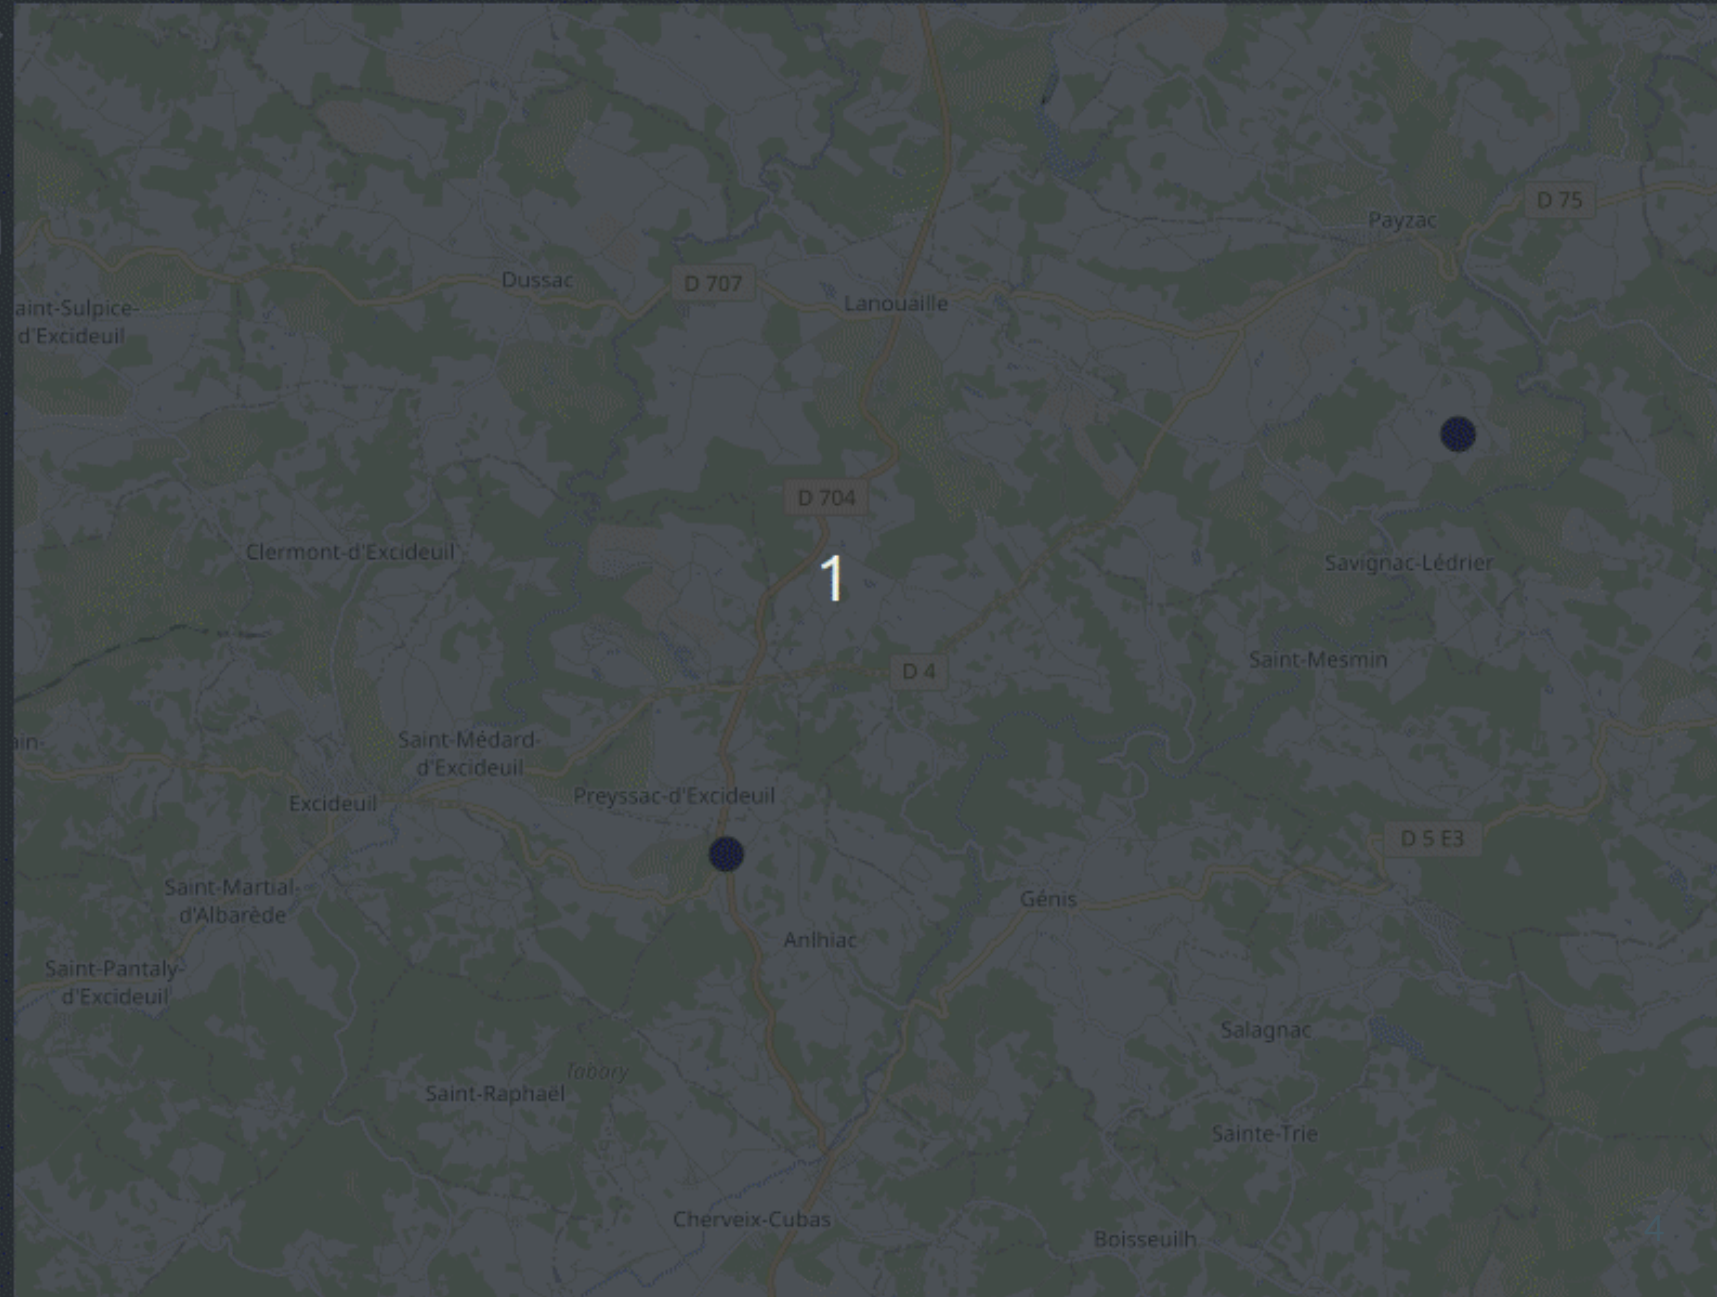

How to

- Create a project with some layers
- Use the Lizmap plugin to configure some options specific for the web (extent, scales, tools available etc.)
- And upload on the Lizmap server
- You've got a web map based on the QGIS project

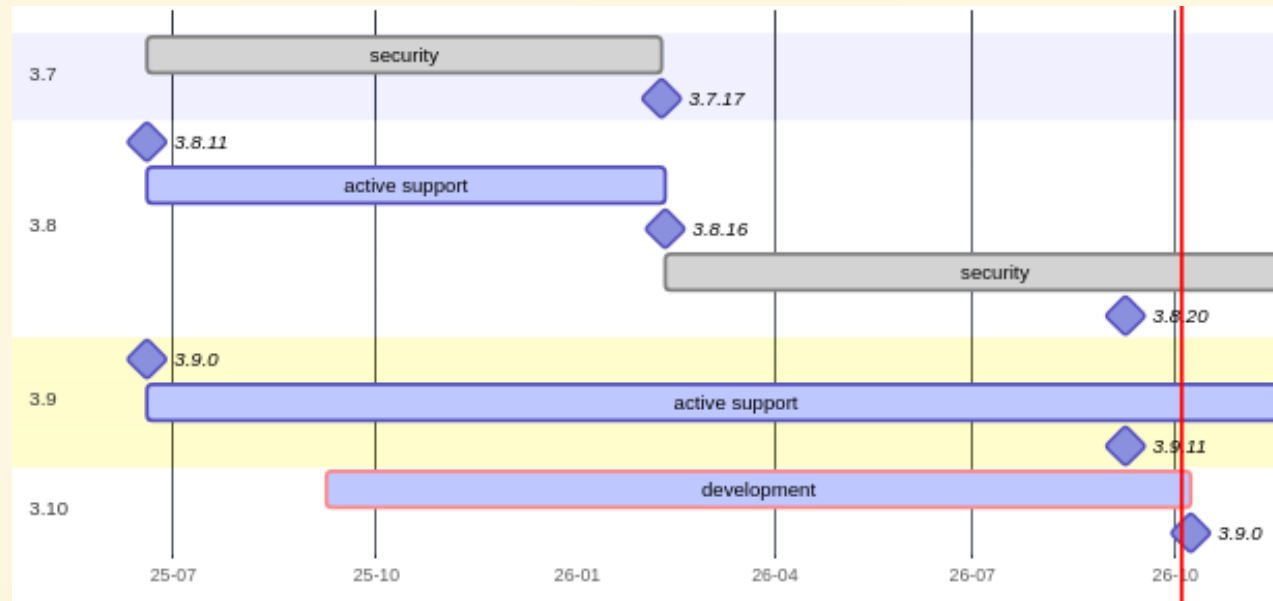

Full featured ?

- **Layers:** visibility, opacity, metadata, export, filter, selection, etc.
- **Tools:** measure, print, locate, geolocation, attribute table, etc.
- **Editing layer:** create, modify, delete features, with QGIS form, snapping, expressions, etc.

Lizmap Web Client maintained versions

- **3.8** as security release since 2026.02
- **3.9** as active release since 2025.06
- **3.10** as release candidate since 2026.05

Next Lizmap Web Client

3.10 in dev since 2025.09

3.10 in RC since 2026.05

3.10.0 in 2026.10

Lizmap Web Client 3.10 - Attribute Table

Funded by digi-studio, Etra & Faunalia - Developed by Nicolas Boisteault, René-Luc D'Hont & Riccardo Beltrami

Lizmap Web Client 3.10 - Geolocation heading

Funded by Terre de Provence Agglomération - Developed by René-Luc D'Hont & Nicolas Boisteault

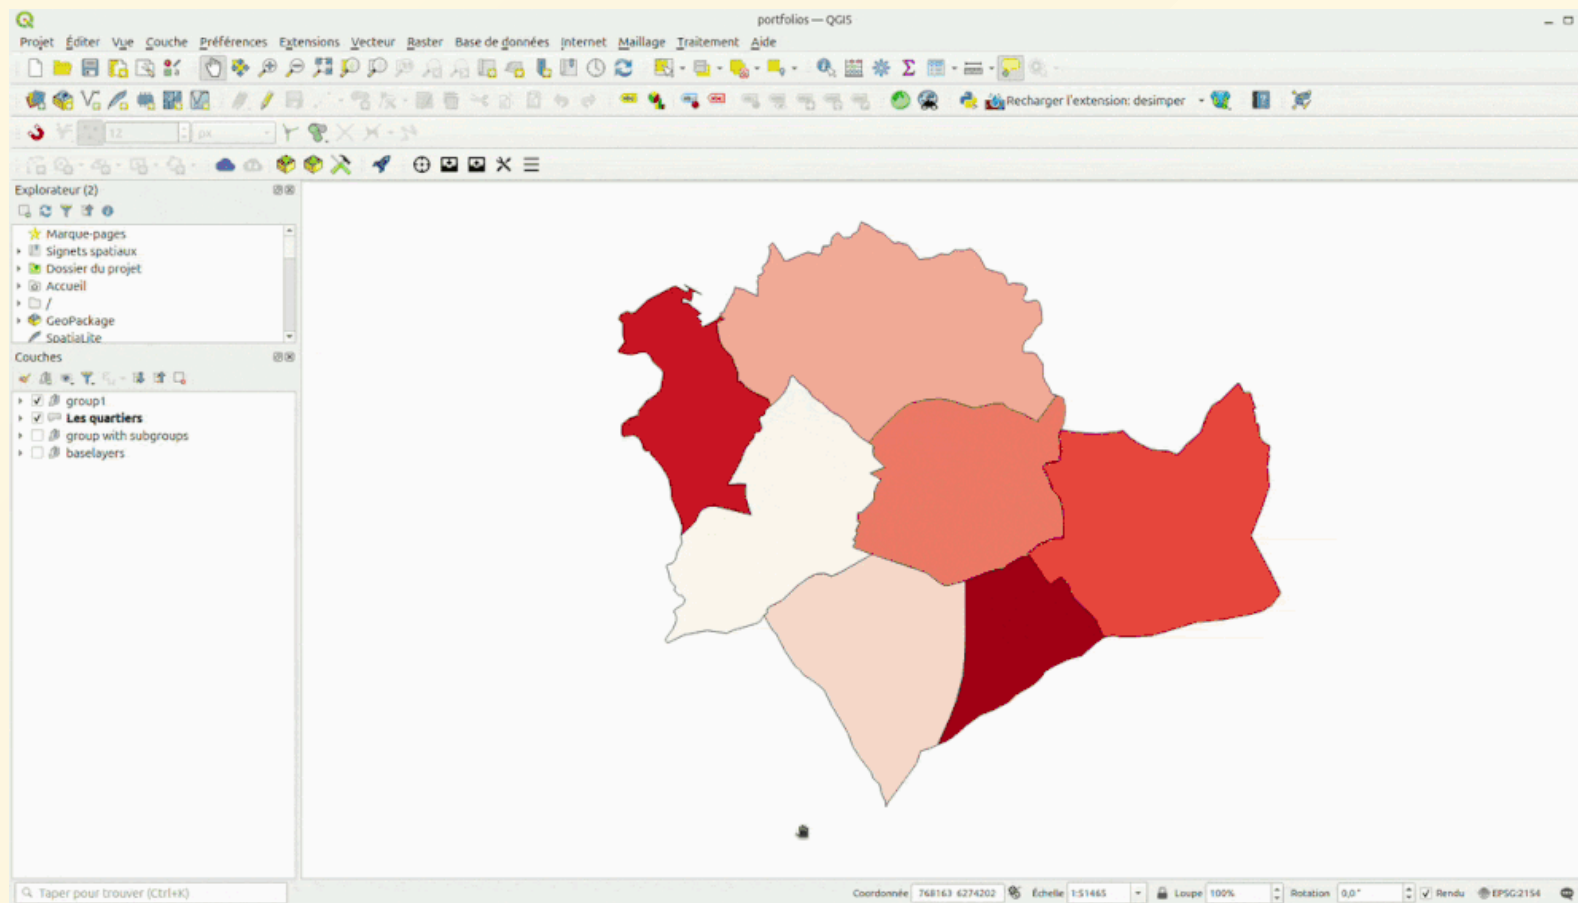

Lizmap Web Client 3.10 - Panoramax

Funded by Terre de Provence Agglomération - Developed by Nicolas Boisteault

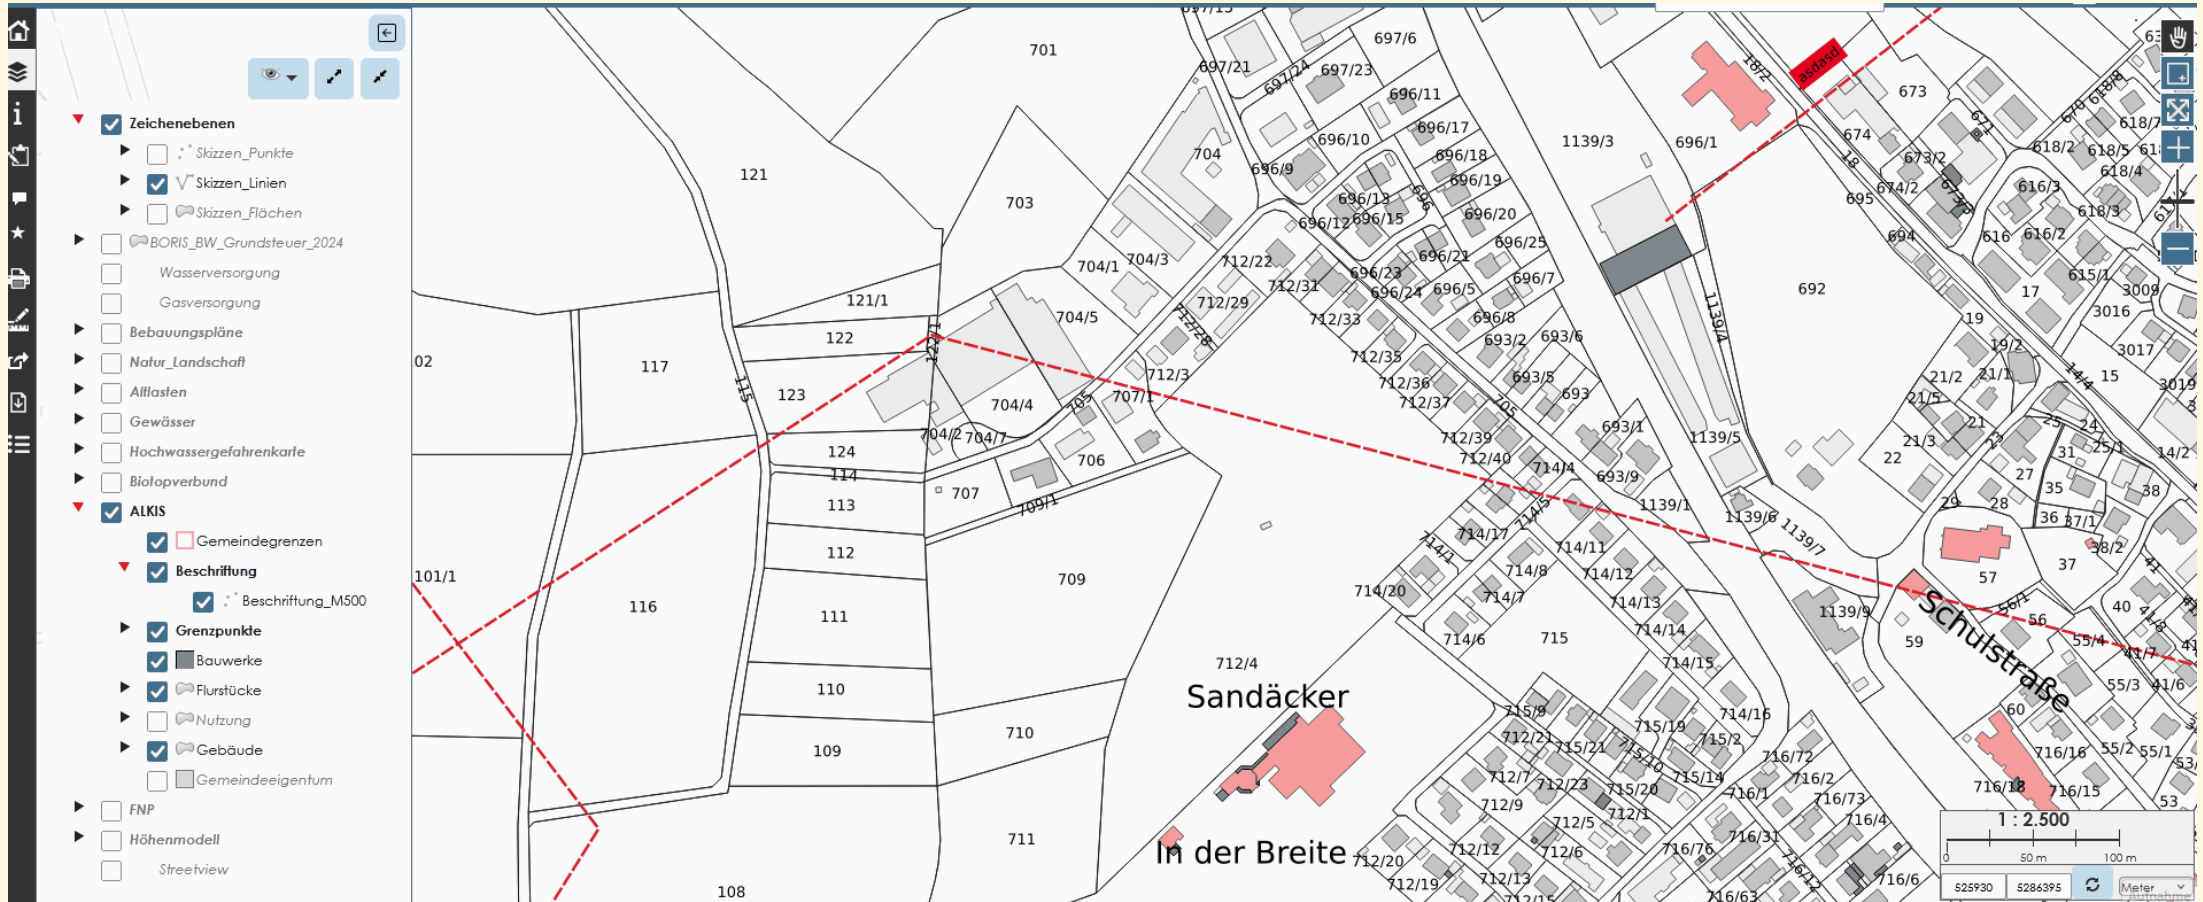

Lizmap Web Client 3.10 - Portfolio

Funded by the Municipality of Mirandela - Developed by René-Luc D'Hont

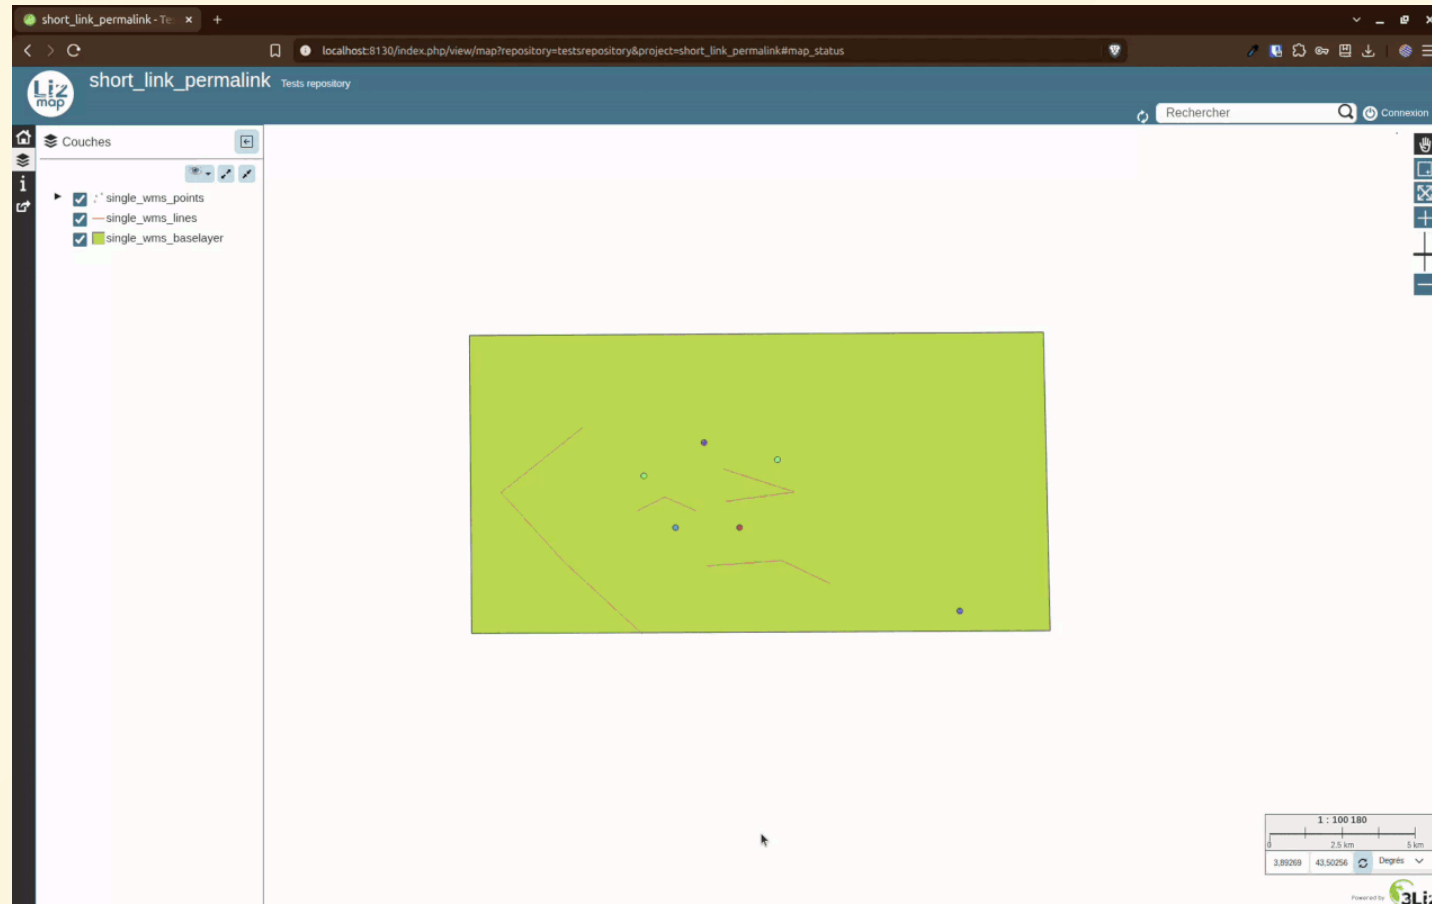

Lizmap Web Client 3.10 - DXF Export

Developed by Lorenz Meyer

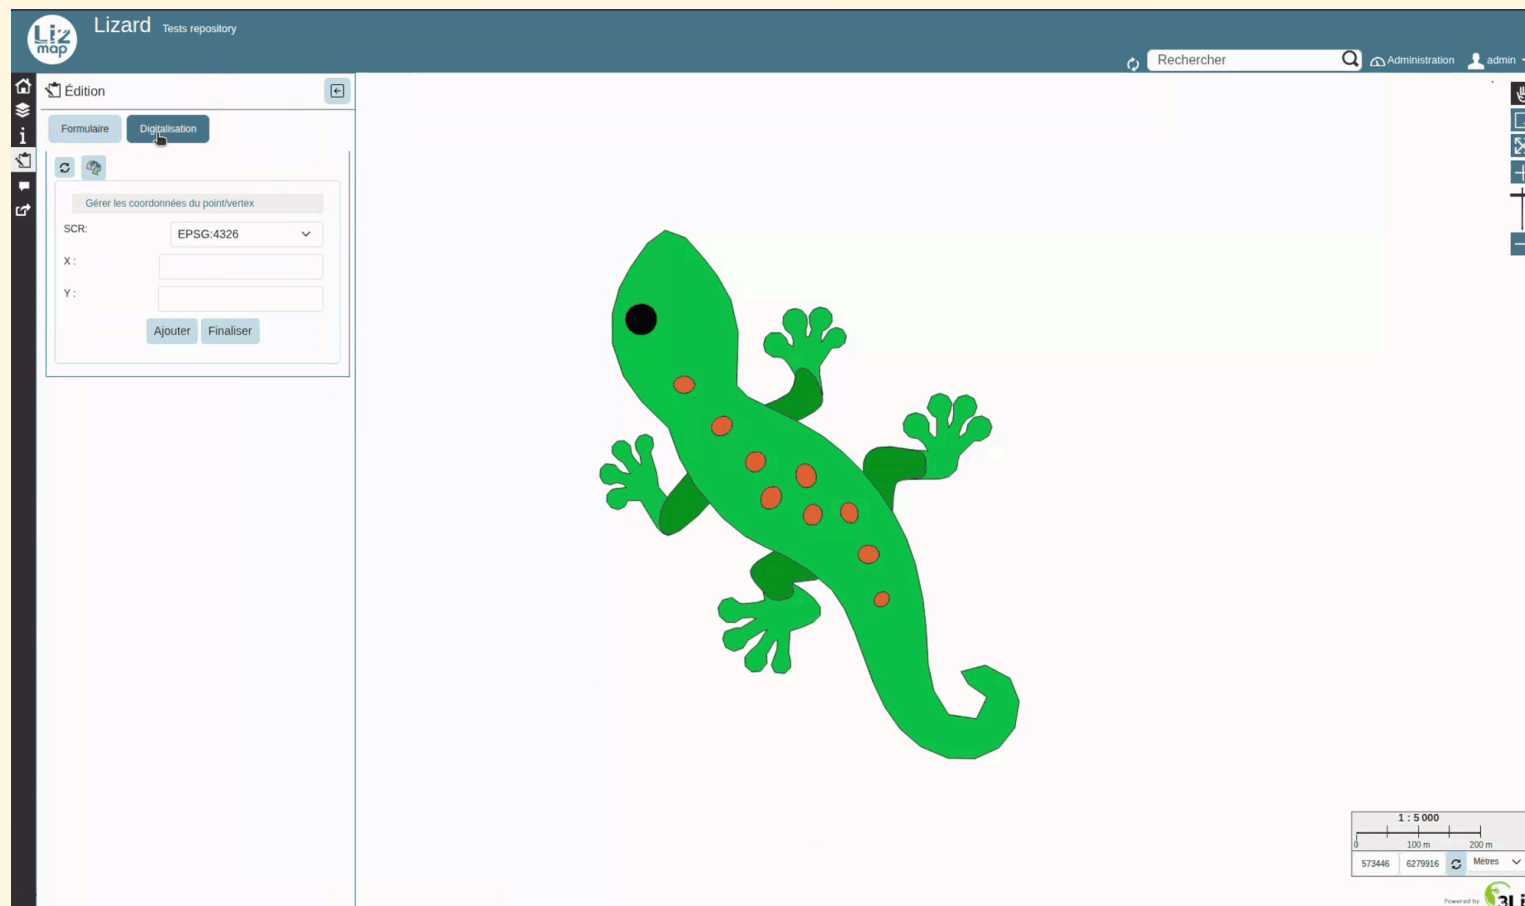

Lizmap Web Client 3.10 - Shortlink

Funded by Etra - Developed by Riccardo Beltrami

Lizmap Web Client 3.10 - Copy/Paste in editing

Developed by Lorenz Meyer

Lizmap Web Client 3.10 - Many others enhancements

- Editing
 - Apply default value on update
 - Automatically enable snapping
 - Background color defined in QGIS for form tabs
 - For attachments and images, file names now follow the default value: expression
 - Support for many-to-many relations in the form
- Printing
 - Users can print at a custom scale
 - Single atlas feature now respects the configuration: expression
 - Export a PDF with several atlas features
- Popup
 - child layers are now correctly placed in the chosen group or tab
 - group all popups by layer, in a tabular view
- Tooltip - QGIS symbology can now be displayed, on hover, the icon is enlarged

Lizmap Web Client 3.10 - Thanks

- To funders
 - Etra
 - Faunalia
 - Terre de Provence Agglomération
 - Municipality of Mirandela
 - Conseil départemental du Gard
 - digi-studio
 - CC Parthenay-Gâtine
 - CC Bièvre Est
- To developers
 - Lorenz Meyer
 - Riccardo Beltrami

What's next for Lizmap Web Client ?

Ordered features

- Open the attribute table in a new browser tab / window
- Light offline mode
- REST APIs to manage Lizmap config
 - Create repositories
 - Push QGIS Projects

☐ Send automatically when saving

Local computer

Create "media" directory

Remote server

Create a new Lizmap repository

Create "media" directory

File based layers status

1. Refresh local files used

2. Send these files on the server

3. Refresh status

Only files located in the **current QGS file directory (or in a sub-directory)**, having a file weight less than **10 MB** and having extensions **fgb, gpkg, xlsx, xls, csv, ods, kml, geojson** are supported.

Name	Relative path	Date time	Size	Actions

Project file status

QGS file

CFG file

Thumbnail file

Media directory

Action file

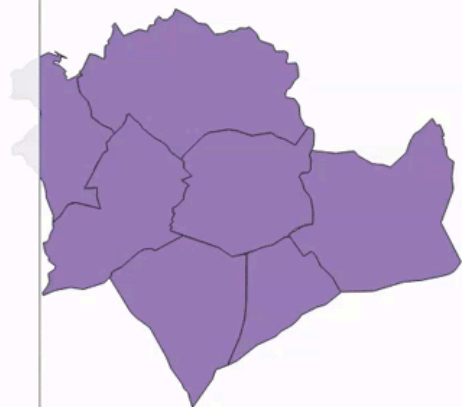

ouches

- ☐ random_points
- ☐ quartiers_shp
- ☒ Les quartiers à Montpellier
- relation**
 - ☐ Parent - Neighbourhood
 - ☐ Child - with space - sub-neighbourhood
 - ☐ child_neighbourhood

New open attribute table

Lizmap Web Client 4

- Dropped OpenLayers 2
- Filter Manager
- Better QJazz integration:
 - Async printing
 - Async vector export
 - Managing loaded projects
- Better QGIS Desktop integration
 - Use REST APIs to manage Lizmap config
- Use other QGIS Project storages: PostgreSQL, S3, etc.
- Some other cool things

Thanks for your attention

Any questions ?
